IS 543 – Homework #7

October 9th 2019

Rose: I love the ability to instantly preview any code you write with SwiftUI. The syntax is short and precise which makes it easy to use and understand. I also think that constraints will be easier with SwiftUI compared to Auto Layout in Storyboards. One of my favorite features is the ability to clip photos/views into different shapes, it's so much easier than anything that is currently available.

Bud: I want to try to make my next application using entirely SwiftUI just to give it a fair chance against Storyboards. I feel like I'm definitely biased due to years of experience using Storyboards and I'm hesitant to scrap everything I know and have learned for something so different.

Thorn: I wish there was an option to mix both SwiftUI and Storyboards. There are some things I feel are much easier on storyboard and others that are much more intuitive on SwiftUI. Another thing to think about is because of how new SwiftUI is, there will be much less support online compared to Storyboard integration (although there will be plenty of support as time passes and SwiftUI becomes more popular).
