Grader: _____   Name: _____ Hunter Casillas _____

Project 3 Rubric

Item	Points	Score
Does the project you turned in compile?	1	1
Does the project compile without any warnings?	2	2
Are the required tasks all complete?		
1. App navigates from volumes to books to chapters to scripture content	5	5
2. All content comes from the SQLite database, not hard-coded	3	3
3. Uses split view controller to display content (in the master view controller), and works on all types of devices	3	3
4. Works in all orientations; supports auto-rotation properly	3	3
5. Displays map in detail view controller; displays pins on the map for geocoded places in that correspond to the current scripture content	3	3
6. Tap on place in scriptures zooms to the geocoded place's pin in the map	2	2
7. Map always has title, and title updates appropriately for the user's context (e.g. when they tap on a place name in the scriptures and you zoom in)	2	2
8. iPhone supports navigation from scriptures to map	2	2
Is the coding style consistent? Did the student use whitespace consistently (indenting consistently, dividing code sections consistently, using spaces between operators consistently, etc.)? Is the code sloppy or otherwise hard to read? Too many comments? Not enough comments?	2	2
Is the UI beautiful? Are elements neatly aligned, sized, and balanced?	2	2
Was the work done on time? (20% penalty per day or fraction of a day late)		
Other excellent extras? (Explain.) Created custom class for annotations to implement callout view with the location name and coordinates and added custom color to the annotations that matches the icon, tint, and launch screen. Added reload button to show all scripture places if looking at single place. Auto-selects single annotation for user after setting the region on the map.	0-3	0
Other problematic aspects? (Explain.) If for some reason the books/chapters don't appear in the simulator, just run the app again. It always works first time on a real device, but for the simulator you have to run it twice sometimes and then it always works after that. I wanted to change the WebView link color to match the dark red application theme, but couldn't figure out how to get it done.		
Total	≤ 30	30

Your score total must be 30 or less. You don't need to do anything extra to get 30 points. If you did something extra that is nice, it might compensate for flaws elsewhere. If you specify extra points, it needs to be for something that really is "excellent", not just interesting.
